

CENTROFIX

EN

As an accessory, the manual positioning device is available for measuring individual test specimens with the digi test II and the Gelomat. Through modular attachments on the Centrofix, samples and molded parts of any kind can be clamped and fixed for measurement.

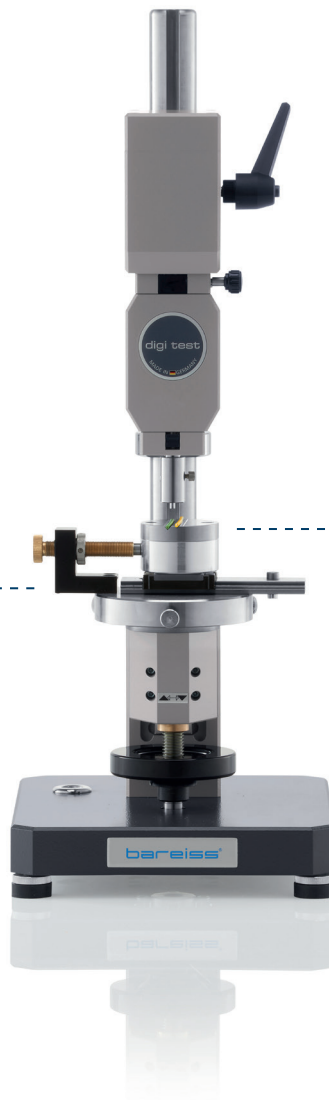

The Centrofix is a smart, modular solution for positioning and securing your samples to achieve measurement results free from user influence. The most common measurement errors arise from inadequate sample fixation. The Centrofix provides the perfect solution for securing your sample in compliance with standards. The positioning device is available with numerous attachments but can also be customized to meet any specific customer requirements.

CENTROFIX

EN

FEATURES

The Centrofix positioning devices ensure the optimal measurement position of test specimens. This guarantees the most accurate measurement values without user influence, giving you more time to focus on what matters most.

A wide range of standard attachments provides ideal support for secure measurement results on your samples. Thanks to our extensive manufacturing capabilities, we can precisely customize the template to meet your specific requirements.
